

# Drivers Not Available for Embrighten (Jasco)

Friday, February 23, 2024 9:20 AM

Hi Philh30,

I have been using your drivers on my Z-wave and Zigbee light switches and they work great. I recently purchased a new Embrighten Zigbee switch (model 43080) and a new Embrighten Z-wave switch (Model 4944-3430). Sadly, your Edge drivers aren't showing up for either of these switches. I've put images of the device details below.

Do your drivers support these devices? Am I doing something wrong? When I configure other Embrighten (Jasco) switches, your drivers show up just fine (see third image).

Any insight you can give me on this would be greatly appreciated!

Jonathan
